# TW-R30-M-B128 HF Tag

#### Technical data

| Туре                                       | TW-R30-M-B128                       |
|--|-------------------------------------|
| ID   | 7030210                             |
| Remark to product                          | For direct mounting on and in metal |
| Data transfer                              | Inductive coupling                  |
| Technology                                 | HF RFID                             |
| Operating frequency                        | 13.56 MHz                           |
| Memory type                                | EEPROM                              |
| Chip                                       | NXP I-Code SLI-X                    |
| Memory                                     | 128 Byte                            |
| Memory                                     | Read/Write                          |
| Freely usable memory                       | 112 Byte                            |
| Number of read operations                  | unlimited                           |
| Number of write operations                 | 10⁵                                 |
| Typical read time                          | 2 ms/Byte                           |
| Typical write time                         | 3 ms/Byte                           |
| Radio communication and protocol standards | ISO 15693<br>NFC Typ 5              |
| Minimum distance to metal                  | 0 mm                                |
| Temperature during read/write access       | -25+85 °C                           |
| Temperature outside detection range        | -40+85 °C                           |
|  | 140 °C, 1x100 h                     |
| Design                                     | Hard tag, R30                       |
| Diameter                                   | 30 mm                               |
| Housing material                           | Plastic, PET                        |
| Active area material                       | Plastic, PET, black                 |

### **Features**

- 3 different mounting options in/on metal, incl. accessories
- ■EEPROM, memory 128 byte
- For direct mounting on and in metal

## Functional principle

The HF read/write devices operating at a frequency of 13.56 MHz form a transmission zone the size of which (0...500 mm) varies, depending on the combination of read/write head and tag used.

The read/write distances mentioned here only represent standard values measured under laboratory conditions, free from any influences caused by surrounding materials.

The read/write distances of tags suitable for mounting in/on metal were determined in/on metal.

Attainable distances may vary by up to 30 % due to component tolerances, mounting conditions, ambient conditions and material qualities (especially when mounted in metal). Testing of the application under real operating conditions is therefore essential, especially with on-the-fly reading and writing!

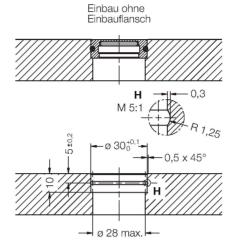

## Technical data

| Protection class | IP68 |
|------------------|------|
| Packaging unit   | 1    |

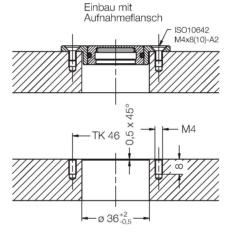

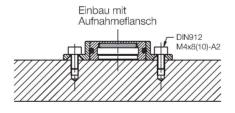

## Mounting instructions/Description

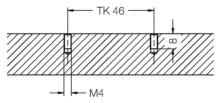

These data carriers can be mounted in 3 different ways:

- 1. Directly potted or glued in metal (without Oring)
- 2. Installed in metal with O-ring (fixed with 2 screws)
- 3. Mounted upside down on metal (fixed with 2 screws)

Freimaßtoleranzen: ISO 2768-m
